Medicare Cuts Threaten Osteoporosis Care

Drastic reductions in Medicare payments for bone density testing begin on January 1, 2007. Additional cuts are scheduled for each year until 2010. These cuts are so severe that most bone density testing centers will soon be forced to close their doors. This is an extremely serious situation that is likely to have a major impact on the care of osteoporosis in the US. Access to bone density testing may become limited to hospitals, the quality of testing may suffer, and comparison with previous tests may not be possible.

This is happening despite other federal initiatives that recognize that osteoporosis is underdiagnosed and undertreated. The US Surgeon General’s Report on Bone Health and Osteoporosis encourages the use of bone density testing to diagnose osteoporosis before the first fracture occurs. More bone density testing rather than less is what is needed. Please consider contacting your legislators to tell them how you feel.

New Mexico Congressional Delegation

Would you like to receive this newsletter in electronic format?
There are two ways to receive this newsletter electronically: 1. Visit our website at www.nmbonecare.com to download the newsletter in PDF format, which you may then print on your home printer, or 2. To be placed on a list for automatic quarterly distribution of the newsletter as a PDF file attached to email, send your request to Yvonne Brusuelas at ybrusuelas@nmbonecare.com.
Clinical Research

Our clinical research program is recruiting patients to participate in studies to test new medications and evaluate new uses for currently available drugs. By participating in a study you will have the opportunity to use one of these medications, have free examinations and tests, and receive reimbursement for your time and travel. If this interests you, please take a few minutes to read the major criteria for participation.

If you think you may qualify for a study, ask for Valerie White, the Research Manager or call the Research Dept. at (505) 923-3232.

Feel free to pass this newsletter to a friend or relative who may be interested. The drug study information will be updated quarterly, since we are continually starting new studies and closing out old ones. If there is nothing for you now, there may be next time.

Birth Control

This is a 12-month research study evaluating an investigational birth control pill. Subjects will receive either the investigational birth control pill or an approved birth control pill.

You may qualify for this study if:

- You are a sexually active female between the ages of 18 and 50
- Are willing to use a birth control pill for 12 months
- In general good physical and mental health

Osteoarthritis

This is a 59-week, open label, long term safety study of an investigational treatment for moderate to moderately severe pain associated with osteoarthritis.

You may qualify for this study if:

- you suffer from osteoarthritis in at least one joint
- are between the ages of 45 and 80

Senior Hypertension

This is a 36-week, randomized, double-blind, parallel group, active-controlled, optional titration study comparing an aliskirin-based regimen to a ramipril-based regimen in patients over the age of 65 with systolic essential hypertension.

You may be eligible to participate in this study if:

- You are over the age of 65
- Have been diagnosed with hypertension

Hypertension

This is an 8 week study to evaluate the efficacy of Telmisartan in combination with Ramipril in patients with Stage I or II hypertension.

You may qualify for this study if:

- You are 18 years of age or older
- You must be able to discontinue current hypertension medication.
- You must not be a night shift worker and awake from 12am–4am on a regular basis
- You must be able and willing to comply with the study for its duration

All study-specific information is IRB approved. To learn more about any study, call (505) 923-3232.
Functional Dyspepsia

This is a 16-week clinical research study to assess the effect of a medication versus placebo in the treatment of functional (non-ulcer) dyspepsia.

You may be eligible to participate if you are:
- Are 18-75 years of age
- Have pain and/or discomfort in your upper abdomen for at least one week for the past month
- Have a documented history of functional dyspepsia
- Able and willing to comply with the study for its duration

Treatment of Postmenopausal Hot Flashes

A 26-week research study in healthy postmenopausal women suffering from vasomotor symptoms (Hot Flashes). There are three different treatment phases: Blinded titration for 7 days, open-label treatment for 15 weeks and blinded tapering over 2 weeks.

You may qualify for this study if you are:
- Postmenopausal female
- Suffer from at least 7 hot flashes in a 24 hour period.
- Able and willing to comply with the study for its duration.

Irritable Bowel Syndrome

This is a an 8-week study to evaluate the safety and efficacy of an investigational medication compared with an FDA approved drug versus placebo for the relief of abdominal pain or discomfort in patients with IBS.

You may qualify for this study if you are:
- At least 18 years of age and diagnosed with IBS
- Recurrent abdominal pain or discomfort occurring for the first time at least six months ago
- Able and willing to comply with the study for its duration.

Type 2 Diabetes

This study is being undertaken to compare the effect of inhaled insulin in combination with basal insulin therapy versus a premix of intermediate acting and rapid acting insulin.

You may qualify for this study if you:
- Have been diagnosed with diabetes for at least two years
- Are currently receiving a pre-/self mixed insulin therapy 2-3 times daily
- Non-smoker between the ages of 18 and 80

Osteoporosis Foundation of New Mexico

Free Educational Presentations

2nd Thursday of every month:
Rehabilitation Hospital of New Mexico (formerly St. Joseph’s Rehabilitation Hospital)
505 Elm St NE
Albuquerque, NM 87102
1:30 - 3:00PM

- January 11, 2007
  Steven Wong, M.A.
  “Improving Balance with Tai Chi”

- February 8, 2007
  Barbara Thorpe, CNP
  “Investigation of Sunlight Exposure-Vitamin D”

- March 8, 2007
  George Frazer
  “Strength Training Do’s & Don’ts”

The support group is open to the public. It is a great opportunity to talk to osteoporosis experts for as long as you want.

Consider attending if:
- You have osteoporosis,
- You have a loved one with osteoporosis, or
- You are interested in learning more about osteoporosis.

To RSVP your attendance call 338-6333

KEEPING OUR NEW YEAR’S RESOLUTIONS

The average person keeps their New Year’s resolutions for two weeks or less.

If your resolution involves health habits such as exercising or weight loss, I encourage you to continue until it becomes habit. It is a well-known fact that to create a new habit you have to go through the process at least 21 days in a row.

If you make some health lifestyle changes, you can decrease your risks for heart attacks, strokes and diabetes. You will also look and feel better. In our society, a large percentage of us are overweight or obese. Watching what we eat and exercising will help.

Let’s make this the year that we “get health”.

Happy 2007!

Do You Have the Flu?

This is a one month research study to assess the outcomes of patients presenting within 48 hours of developing flu symptoms:

You may qualify for this study if you are:
- Over the age of 18
- Have flu symptoms for no more than 48 hours
- Willing and able to comply with the study for its duration

Male Osteoporosis

This is a one year clinical research study testing ibandronate for treatment of osteoporosis in men.

You may qualify for this study if you are:
- A male between 30 and 79
- Have a diagnosis of Osteoporosis
- Able and willing to comply with the study for its duration

Severe Osteoporosis

This is a one-year clinical research trial testing an investigational treatment for severe osteoporosis in postmenopausal women.

You may be eligible to participate if you are:
- Are post-menopausal female between 45-89 years of age
- Have been diagnosed with severe osteoporosis
- Able and willing to comply with the study for its duration

Osteopenia

This is a one year, double blinded, research study to assess the effects, safety and tolerability of Vitamin D analog on bone mineral density in postmenopausal women with osteopenia.

You may be eligible to participate if you are:
- A post-menopausal female between 55-80 years of age
- Diagnosed with Osteopenia
- Are able and willing to comply with the study for its duration.
Old Folks Are Worth A Fortune

Old folks are worth a fortune, with Silver in their hair, Gold in their teeth, Stones in their kidneys, Lead in their feet and Gas in their stomachs.

I have become a lot more social with the passing of the years. Some might say I’m a frivolous gal. I’m seeing Five Gentlemen everyday.

As soon as I wake, Will Power helps me get out of bed. Then I go see John. Then Charlie Horse comes along and when he is here, he takes a lot of my time and attention. When he leaves, Arthur Ritis shows up and stays the rest of the day. He doesn’t like to stay in one place very long, so he takes me from joint to joint. After such a busy day, I’m really tired and glad to go to bed with Ben Gay. What a Life!

PS: The preacher came to call the other day. He said that at my age, I should be thinking about the Hereafter. I told him “I do, all the time, No matter where I am, in the parlor, upstairs, in the kitchen, in the yard, etc., I ask myself, What am I hereafter?”
To participate in clinical research studies, call (505) 923-3232.

Ask Dr. Mike Lewiecki about . . . OSTEOPOROSIS

Dear Dr. Lewiecki– I know that I need calcium to keep my bones healthy, but there are so many kinds in the store that I get very confused. What is the best calcium and how should I take it? Eva C. Albuquerque, NM.

Dear Eva– You are not alone in being bewildered by the vast assortment of calcium preparations that are widely advertised and on the shelves at many stores. The good news is that it is usually not very complicated. Let me explain what we all need and how we can get it.

Our bodies lose about 1200 mg of calcium each day, mostly in the intestines and urine. If we do not put at least this much back into our bodies, there will be a loss of calcium and eventually a loss of bone. It is probably best to replace this lost calcium with foods that are naturally high in calcium. Dairy products are the best dietary source of calcium. A quart of milk, for example, contains about 1200 mg of calcium and can supply all we need for the day.

Unfortunately, most of us have diets that are calcium deficient, so we need to get the extra calcium some other way. This can be in the form of foods or drinks that are fortified with calcium, or by calcium supplements. The two most common kinds of calcium supplements are calcium carbonate and calcium citrate. Both of these are fine, but no more than 600 mg should be taken at one time, since larger doses will not be well absorbed. Also, keep in mind that it is best to take calcium carbonate with a meal or snack, while calcium citrate can be taken either with food or on an empty stomach. If you have had kidney stones in the past, it might be best to take calcium citrate.

Some people become constipated with calcium. If that is the case, it is worth trying a preparation that combines calcium and magnesium. The laxative effect of the magnesium may counteract the constipating effect of the calcium. A calcium product that contains vitamin D provides some added benefit to help with calcium absorption.

Sincerely,

Dear Dr. Lewiecki– I know that I need calcium to keep my bones healthy, but there are so many kinds in the store that I get very confused. What is the best calcium and how should I take it? Eva C. Albuquerque, NM.
